

Customer Journey Management and Design

Customer Journey Management and Design

Introduction

The Customer Journey Management and Design course develops an understanding of how customers interact with an organization across every stage of the relationship. It examines customer journey mapping, journey stages, customer touchpoints, and experience drivers. Participants learn to connect customer needs, business processes, channels, and service interactions into coherent journey models. The program develops methods for identifying pain points, moments of truth, friction, and opportunities to improve the customer experience. It emphasizes journey analysis, service design, customer feedback, experience measurement, and cross-functional alignment. Participants will evaluate existing journeys and design practical improvements that strengthen satisfaction, engagement, retention, and business value.
