- Understand the importance of data cleaning to ensure accuracy.
- Discover methods for organizing data for analysis.
- Identify reliable data sources, such as surveys, databases, and financial statements.
- Practice organizing data for easy access and meaningful analysis.

Unit 3: Data Preparation for Analysis:

- Master techniques for gathering high-quality data from diverse sources.
- Understand the processes of data validation and verification.
- Learn how to format and structure data for statistical analysis.
- Explore tools and technologies for efficient data preparation.
- Understand the impact of data preparation on the accuracy of business insights.

Unit 4: Statistical Tools and Techniques for Business Analysis:

- Gain proficiency in basic and advanced statistical tools.
- Explore techniques such as regression analysis, hypothesis testing, and correlation.
- Learn how to analyze trends and patterns using statistical methods.
- Understand statistical sampling methods for business research.
- Apply statistical techniques to real business scenarios.

Unit 5: Interpreting Financial and Business Data:

- Develop the ability to interpret business and financial data for decision-making.
- Learn to identify key insights from data trends and patterns.
- Study how to test assumptions with real-time data.
- Understand the concept of data-driven decision-making.
- Learn how to validate data interpretations and identify potential biases.

Unit 6: Financial Statements and Metrics:

- Develop an understanding of key financial statements: balance sheet, income statement, and cash flow statement.
- Learn about important financial metrics, such as ROI, ROE, and profitability ratios.
- Study how these financial metrics help assess a company's performance.
- Understand the interrelationship between financial statements and metrics.
- Learn how to analyze financial statements to gauge financial health.

Unit 7: Financial Health Assessment and Decision Making:

- Learn how to assess the financial health of a business using financial indicators.
- Understand how to evaluate performance based on key financial ratios.
- Study the role of financial analysis in guiding business decisions.
- Practice making data-driven decisions based on financial analysis.
- Develop the ability to make recommendations for financial improvements.

Unit 8: Financial Forecasting and Budgeting:

- Understand how to create financial forecasts to guide business decisions.
- Learn techniques for budgeting, resource management, and cost control.
- Study how to anticipate potential risks using financial forecasts.
- Practice preparing forecasts and budgets for various business scenarios.
- Learn how to adjust forecasts and budgets based on changing business conditions.

Unit 9: Financial Modeling and Risk Management:

- Understand the principles of financial modeling and its role in business analysis.
- Learn how to create dynamic financial models using software tools.
- Study how financial models support decision-making and risk management.
- Explore the relationship between financial modeling and business strategy.
- Learn how to use financial models to evaluate potential risks and opportunities.

Unit 10: Advanced Financial Statement Analysis and Performance Evaluation:

- Learn advanced techniques for analyzing financial statements, including ratio analysis.
- Study vertical and horizontal analysis methods for comparing financial data over time.
- Understand how to evaluate profitability, liquidity, and solvency.
- Practice performing comprehensive performance evaluations using financial statements.
- Make actionable recommendations for improving business efficiency and maximizing profitability.
