Management Accounting for Cost Control and Performance Plans

Ref: 121883_1056370 **Date:** 21 – 25 June 2027 **Location:** Johannesburg (South Africa) **Fees:** 5300 Euro

Introduction

Management accounting provides financial and operational information that supports internal planning, control, and decision-making. This Management Accounting for Cost Control and Performance Plans course examines how managers use cost data, budgets, performance measures, and analytical techniques to improve organizational efficiency. Participants explore cost behavior, cost allocation, variance analysis, budgeting, and responsibility accounting within practical business contexts. The program explains how management accounting supports cost control strategies and performance planning across departments and business units. It covers how to interpret management reports and link financial results to operational performance. Participants will understand how to use management accounting information to support informed decisions and sustainable performance improvement.

Targeted Groups

This Management Accounting for Cost Control and Performance Plans training targets professionals seeking knowledge and skills:

- Finance managers and accounting professionals.
- Management accountants and cost accountants.
- Budgeting and planning specialists.
- Financial analysts and business analysts.
- Department managers with budget responsibilities.
- Operations managers monitoring business costs.
- Project managers controlling resource utilization.
- Internal auditors reviewing financial controls.

- Rising production costs are investigated within a manufacturing company.
- A department analyzes unfavorable budget variances.
- Participants develop skills through the following cases:
- Product profitability is evaluated across different business offerings.
- A flexible budget is prepared to respond to changing demand.
- Break-even analysis supports pricing and profitability decisions.
- Performance indicators and accountability measures are introduced within a business unit.
- The management team develops a cost-reduction and performance-improvement plan.

Course Content

Unit 1: Management Accounting and Cost Information

- Define the role of management accounting.
- Compare management and financial accounting.
- Identify internal users of accounting information.
- Explain planning, control, and decision support.
- Classify costs by purpose and behavior.
- Distinguish direct and indirect costs.
- Identify relevant cost information.
- Examine ethical responsibilities in management accounting.

Unit 2: Cost Analysis and Costing Methods

- Analyze fixed, variable, and mixed costs.
- Understand cost behavior patterns.
- Apply cost estimation principles.
- Explain job costing systems.
- Examine process costing methods.
- Allocate indirect and overhead costs.
- Evaluate activity-based costing methods.
- Identify major organizational cost drivers.

Unit 3: Budgeting and Cost Control Planning

- Explain the purpose of business budgeting.
- Prepare operating budget components.
- Develop sales and production budgets.
- Prepare cost and expenditure budgets.
- Understand cash budget planning.
- Apply flexible budgeting principles.
- Link budgets with strategic priorities.
- Establish effective cost control procedures.

Unit 4: Standard Costing and Variance Analysis

- Explain standard costing principles.
- Establish material cost standards.
- Develop labor cost standards.
- Identify overhead cost standards.
- Calculate and interpret cost variances.
- Analyze price and efficiency variances.
- Investigate significant performance deviations.
- Recommend corrective management actions.

Unit 5: Performance Measurement and Management Decisions

- Apply responsibility accounting principles.
- Identify cost, profit, and investment centers.
- Develop financial performance indicators.
- Use operational performance measures.
- Evaluate profitability and contribution.
- Apply cost-volume-profit analysis.
- Support strategic resource allocation decisions.
- Integrate cost control with performance plans.

Final Insights & Key Takeaways

Management accounting transforms cost, budget, and performance information into structured insights that support stronger planning, control, accountability, and managerial decision-making. Effective application enables organizations to manage resources efficiently, investigate performance gaps, improve profitability, and align operational activities with planned objectives.
