Management Analysis & Operational Auditing Course

Ref: 15312_1063127 **Date:** 28 February – 4 March 2027 **Location:** Muscat (Oman) **Fees:** 5500 Euro

Introduction:

In today's dynamic business landscape, the need for practical management analysis and operational auditing has never been more critical. This management analysis and operational auditing course delves into these two interconnected disciplines' core principles and practices. It equips participants with the knowledge and skills to evaluate and enhance organizational performance while ensuring compliance with established standards.

This management analysis and operational auditing course provides a comprehensive foundation for professionals seeking to excel in management analysis and operational auditing. Participants will gain the expertise needed to drive organizational improvements, enhance compliance, contribute to long-term success, and become skilled management analysts and operational auditors.

This management analysis and operational auditing course entails a substantive insight into the precepts of operations management analysis, process analysis in operations management, and substantial themes in operational auditing, including management and operational audit practices. It will endow individuals with the proficiency to undertake management operations and case study analysis, utilize operations management analysis tools, and perceive the meaning of operational auditing in a business context.

Targeted Groups:

- Managers and Supervisors.
- Auditors and Internal Control Professionals.
- Business Analysts.
- Finance and Accounting Professionals.
- Operations Managers.
- Compliance Officers.
- Anyone is interested in improving organizational effectiveness.

Course Objectives:

Upon completing this management analysis and operational auditing course, participants will be able to:

- Conduct thorough management analysis to identify inefficiencies and areas for improvement.
- Develop and implement effective operational auditing strategies.
- Utilize data analytics for decision-making and process optimization.
- Enhance risk management and internal control systems.
- Ensure compliance with industry regulations and best practices.
- Improve overall organizational performance and profitability.

Dubai - UAE: +971 4 450 5697
Istanbul - Türkiye: +90 539 599 1206
Amman - Jordan: +962 79 712 3347

Targeted Competencies:

Target competencies in this management analysis and operational auditing training will be able to improve:

- Data Analysis and Interpretation.
- Risk Assessment and Mitigation.
- Internal Control Implementation.
- Process Optimization.
- Compliance Management.
- Effective Communication.
- Problem-solving and Decision-Making.

Operational Auditing in Practice:

Understanding operational auditing and its applications is crucial for maintaining a robust management system. This management analysis and operational auditing course takes a deep dive into operational audit management, revealing how auditors can act as audit operations managers to identify potential issues before they become problematic.

It also aims to elaborate on the types of process analysis in operations management, which can help pinpoint areas ripe for improvement or innovation. Through the lens of managing operations case with study analysis, participants will learn how to leverage this information for strategic decision-making.
