Airline Route Planning and Aviation Market Analytics

Ref: 16160_1081473 **Date:** 26 – 30 July 2027 **Location:** Paris (France) **Fees:** 6900 Euro

Introduction:

The Airline Route Planning and Aviation Market Analytics training course provides participants with specialized expertise in route forecasting, air transport market research, and network development strategies. With the global air transport sector rapidly evolving, the course empowers professionals to navigate the complexities of airline network planning and aviation analytics using real-world data and industry-standard tools.

This Airline Route Planning and Aviation Market Analytics program combines theoretical foundations with practical insights into airline business models, route viability analysis, and market segmentation. Participants will gain exposure to international benchmarks and best practices across European, Asian, and American air transport markets.

From understanding traffic forecasting methods to constructing business cases for new routes, this Airline Route Planning and Aviation Market Analytics course is comprehensive and practice-oriented. It emphasizes hands-on experience using data tools like Excel, Tableau, and R for aviation market analysis. Professionals will make informed strategic decisions and optimize route development and market performance.

Targeted Groups:

This Airline Route Planning and Aviation Market Analytics training targets professionals seeking specialized knowledge and skills:

- Route development analysts in airline companies.
- Airport planners and strategy officers.
- Government aviation policymakers.
- Air transport consultants and researchers.
- Business development and commercial managers.
- Aviation marketing and sales professionals.
- Civil aviation authority staff.
- Data analysts focusing on air traffic or aviation economics.
- Logistics and transport infrastructure specialists.
- Regional planners and investment advisors in air transport.

Dubai - UAE: +971 4 450 5697
Istanbul - Türkiye: +90 539 599 1206
Amman - Jordan: +962 79 712 3347

Course Objectives:

Participants will achieve the following objectives by completing the Airline Route Planning and Aviation Market Analytics course:

- Understand various global airline business models and route structures.
- Identify and apply key aviation data sources for demand forecasting.
- Analyze historical air traffic trends and build demand forecast models.
- Evaluate route profitability using industry metrics and KPIs.
- Examine the impact of low-cost carriers on traditional airline networks.
- Interpret government regulations and incentives affecting route viability.
- Create business cases for new air routes based on economic and demographic indicators.
- Apply advanced analytics techniques to aviation market data.
- Segment passengers effectively for targeted airline marketing strategies.
- Conduct air transport market research using both qualitative and quantitative methods to inform decision-making.
- Visualize aviation data insights using tools like Excel and Power BI.
- Interpret industry reports and transform insights into policy or investment decisions.
- Analyze global benchmarks from Europe, Asia, and the Americas for comparative insights.
- Present data-backed recommendations to airline stakeholders and regulators.
- Predict future demand using scenario and sensitivity analysis approaches.
- Assess socio-economic drivers impacting passenger and cargo air transport.
- Develop strategic plans for airline route expansions based on data modeling.

Targeted Competencies:

Participants will gain the following competencies during the Airline Route Planning and Aviation Market Analytics program:

Dubai - UAE: +971 4 450 5697
Istanbul - Türkiye: +90 539 599 1206
Amman - Jordan: +962 79 712 3347

- Analyze and forecast air travel demand with precision.
- Evaluate the economic viability and potential of airline routes.
- Conduct comprehensive competitor and market analysis.
- Build data-driven air transport business proposals.
- Utilize visualization tools to present aviation data effectively.
- Utilize global industry benchmarks for strategic planning.
- Interpret complex aviation databases and forecast trends.
- Recommend policies based on aviation market research.
- Segment and profile passengers using market intelligence.

Course Content:

Unit 1: Route Forecasting and Development:

- Understand the operating models of airlines, including LCCs, full-service carriers, and regional carriers.
- Explore global route development trends by region.
- Compare hub-and-spoke vs point-to-point network models.
- Identify sources for route planning data e.g., OAG, MIDT, Sabre, IATA PaxIS.
- Learn forecasting methods: historical analysis, econometric models, and demand stimulation factors.
- Assess seasonality, holiday peaks, and demand fluctuations to optimize operations.
- Evaluate route KPIs: RASK, load factor, yield, revenue, and costs.
- Calculate the break-even load factor for route viability.
- Explore pricing strategies for new and competitive routes.

Dubai - UAE: +971 4 450 5697
Istanbul - Türkiye: +90 539 599 1206
Amman - Jordan: +962 79 712 3347

Unit 2: Competitive Analysis and Strategic Benchmarking:

- Identify competitor networks using industry databases.
- Analyze the impact of low-cost airlines on route profitability.
- Examine the role of airline alliances and codeshare agreements.
- Compare performance benchmarks across Europe, Asia, and American air markets.
- Conduct a SWOT analysis for competitive positioning.
- Map airline route overlaps and underserved markets.
- Study successful route launch case studies by region.
- Review government aviation policy and its impact on the market.
- Identify the regulatory frameworks and bilateral agreements that affect route access.

Unit 3: Route Business Case and Stakeholder Engagement:

- Structure a comprehensive route development proposal.
- Integrate data from traffic forecasts, financials, and marketing plans.
- Calculate route revenue projections using actual and modeled data.
- Estimate route-specific operating costs and overheads.
- Assess return on investment and time-to-profitability.
- Package a compelling presentation for internal or regulatory approval.
- Understand airport incentives, including fee waivers, marketing support, and start-up aid.
- Communicate proposals effectively to airlines, airports, and civil aviation authorities.
- Evaluate stakeholder interests and align the business case accordingly.

Unit 4: Air Transport Market Research and Data Analytics:

- Understand what market research means in the aviation industry.
- Apply aviation market research to policy, route planning, and business decisions.
- Design and conduct primary data collection, including surveys, interviews, and focus groups.
- Conduct desk research using reputable sources such as ICAO, CAPA, and IATA.
- Analyze market trends using descriptive and inferential statistics.
- Run regression models to examine drivers of air travel demand.
- Conduct scenario planning and sensitivity testing for new markets.
- Utilize Excel for statistical forecasting and financial modeling.
- Build dashboards in Power BI or Tableau to visualize market performance.

Dubai - UAE: +971 4 450 5697
Istanbul - Türkiye: +90 539 599 1206
Amman - Jordan: +962 79 712 3347

Unit 5: Passenger Segmentation and Global Market Case Studies:

- Profile air travelers: leisure, business, and ethnic/VFR segments.
- Measure pricing sensitivity and elasticity by customer segment.
- Integrate socio-economic factors: GDP, tourism, income, and migration flows.
- Analyze long-term travel trends using Boeing and Airbus forecasts.
- Segment markets by travel behavior, route frequency, and seasonal peaks.
- Interpret airline and airport data using platforms like Ch-Aviation and Diio Mi.
- Review international benchmarks from Asia-Pacific, North America, and Europe.
- Develop market-specific route recommendations using real case studies.
- Design action plans for emerging markets based on macroeconomic indicators.

Final Insights & Key Takeaways:

This Airline Route Planning and Aviation Market Analytics training course equips participants with actionable skills in route planning and aviation market research, utilizing data-driven techniques. It blends theory with practical tools, supported by global benchmarks. Participants will develop competitive airline networks and informed policy recommendations. They will confidently support strategic decisions in aviation development.
