Unit 3: Evaluating Reporting Quality and Detecting Financial Manipulation

- Developing an integrated framework for evaluating financial reporting quality.
- Using tools to assess the quality of reported earnings and cash flows.
- Applying the Beneish M-Score model to detect earnings manipulation.
- Identifying indicators of poor balance sheet quality.
- Critically analyzing the accounting standards used.
- Understanding the role of financial auditing in assessing the reliability of financial information.
- Studying cases to identify inconsistencies in financial reports.
- Using risk indicators for early detection of manipulation.
- Evaluating financial sustainability through analysis of accumulated performance.
- Analyzing the implicit implications of notes in annual reports.
- Building internal assessment tools to detect fraud.
- Reading annual reports through an advanced analytical perspective.

Unit 4: Financial Forecasting Techniques Using Advanced Analysis

- Understanding the difference between top-down and bottom-up forecasting.
- Building financial models to forecast revenues and costs.
- Analyzing and accurately forecasting costs of sales.
- Using financial period averages to estimate the budget.
- Estimating fixed assets and accurately calculating depreciation.
- Preparing a three-year financial forecast using historical data.
- Designing financial schedules that support investment decisions.
- Integrating economic data into advanced financial forecasting models.
- Forecasting cash flows using advanced financial analysis techniques.
- Real-world case study: Johnson & Johnson forecasting.
- Conducting sensitivity analysis and identifying the impact of changes in assumptions.
- Developing multiple scenarios for advanced financial forecasting.

Unit 5: Detecting Financial Fraud and False Reporting

- Understanding advanced financial analysis concepts in combating fraud.
- Examining methods used to detect false reporting and manipulation.
- Using advanced cash flow indicators to detect fraud.
- Analyzing real cases of financial manipulation and documenting findings.
- Building an internal control system based on financial analysis indicators.
- Applying fraud analytics tools in financial institutions.
- Evaluating fraud indicators in balance sheets and interim reports.
- Comparing traditional and advanced financial analysis in fraud detection.
- Building a financial risk matrix using trend analysis tools.
- Reading cases and analyzing their results to understand fraudulent methods.
- Practical training on Excel models for fraud detection.
- Providing improvement recommendations to reduce the risks of reporting manipulation.
