Environmental Management Training & Certification Course

Ref: 7013_242567 **Date:** 13 – 17 December 2026 **Location:** Kuala Lumpur (Malaysia) **Fees:** 4900 Euro

Introduction

No business can thrive without considering its impact on the environment and the well-being of people and society. Modern pressures demand that businesses maintain responsible environmental practices, where an environmental management training course becomes critical. This comprehensive environmental management certification course equips managers with the expertise to oversee environmentally sustainable operations.

Professionals will understand how production affects the environment and how environmental concerns are interlinked with climate change, biodiversity, and environmental pollution. The curriculum environmental management course delves into the balance between environmental protection and production efficiency, showcasing the synergies with environmental management techniques and responsiveness to legislation and emergencies.

Acquiring an environmental manager certification through such an environmental management certificate program significantly boosts one's credentials. This environmental management program empowers professionals to take on roles that lead environmental initiatives, ensuring businesses can adapt to and respect our increasingly eco-conscious world.

Environmental Management System Definition and Certificate Programs

An Environmental Management System EMS is a framework that allows an organization to achieve and systematically control its level of environmental performance. The ISO 14001 Standard is one of the world's most recognized EMS frameworks, helping organizations to manage their environmental responsibilities effectively.

For individuals looking to deepen their expertise, various certification courses in environmental management, such as a certificate in environmental management, diploma in environmental management, and environmental management certificate programs, are available. These qualifications equip environmental managers with the necessary skills and accreditation to progress in their careers.

Targeted Groups

- Production and Process Engineers.
- Maintenance Engineers.
- Individuals managing or purchasing hazardous substances.
- Managers, Supervisors, and Consultants are involved in the Environmental Management Systems Implementation Team.
- Personnel are involved in implementing, upkeep, or overseeing an ISO 14001 EMS.
