Advanced Task Management Skills Training Course

Ref: 1041_331474 **Date:** 15 – 26 February 2027 **Location:** Munich (Germany) **Fees:** 9500 Euro

Introduction:

Maintaining high productivity in todays successful businesses requires diligent work and continuous learning in various management skills and techniques. To excel in daily work task management skills, one must possess knowledge and apply skills in management techniques.

Professionals across multiple industries must adopt more productive methods for planning work and tasks, setting appropriate goals, using sound interpersonal skills, and employing effective decision-making strategies. Focusing on productive practices is critical for effective and efficient task management and facilitates organizational changes.

In our task management courses, participants will gain insights into setting goals, planning work and tasks, managing time, making sound decisions, and collaborating productively with others.

The program delivers a suite of practical and impactful techniques and tools that can easily be incorporated into any professional setting. It is designed to bolster confidence in your management abilities and enhance the skills required to effectively apply management concepts and techniques.

The initial module delves into the concepts, principles, and challenges of planning tasks and work while covering topics such as the importance of time management, stress management, task management, project management, and how interpersonal skills affect efficacy. The second module focuses on essential management skills including goal-setting, performance standards, decision-making processes, and change management.

Understanding Task Management:

Task management is the process of managing a task through its life cycle. It involves planning, testing, tracking, and reporting.

Task management can help individuals achieve goals, or groups collaborate and share knowledge to accomplish collective goals. Tasks are also differentiated by complexity, from low to high.

Effective task management requires managing all aspects of a task, including its status, priority, time, human and financial resources assignments, recurrence, dependency, and notifications. These can be lumped together broadly into the basic activities of task management.
