Data Analysis, ESG Governance & Risk for Managerial Decisions

Ref.: 121664_1042206 **Date:** 11 - 15 Jan 2027 **Location:** Boston (USA) **Fees:** 7500 Euro

Introduction

Organizations today operate in an environment characterized by increasing regulatory expectations, stakeholder scrutiny, sustainability commitments, and complex business risks. Effective managerial decision-making requires the ability to transform business data into actionable insights and to integrate environmental, social, and governance considerations into strategic planning. This Data Analysis, ESG Governance & Risk for Managerial Decisions course provides a comprehensive understanding of data analysis techniques, ESG governance frameworks, and enterprise risk management principles that support informed and responsible decisions. Participants will explore how data-driven decision-making enhances organizational performance, strengthens governance structures, and improves risk oversight across business functions. The program examines practical approaches to performance measurement, sustainability reporting, risk assessment, predictive analysis, and executive reporting. It equips professionals with the knowledge required to support sustainable growth, regulatory compliance, and long-term organizational value creation.

Targeted Groups

This Data Analysis, ESG Governance & Risk for Managerial Decisions training targets professionals seeking knowledge and skills:

- Senior managers responsible for strategic decision-making.
- Business analysts supporting organizational performance.
- ESG and sustainability professionals.
- Corporate governance practitioners.
- Enterprise risk management specialists.
- Internal auditors and compliance officers.
- Financial planning and reporting professionals.
- Strategy and performance management teams.
- Project and program managers.
- Board secretaries and governance coordinators.
- Public sector decision-makers.
- Consultants involved in business transformation initiatives.

Course Objectives

Participants will achieve the following objectives by completing the Data Analysis, ESG Governance & Risk for Managerial Decisions course:

- Understand the foundations of data-driven decision making.
- Analyze business data using structured analytical approaches.
- Interpret key performance indicators and business metrics.
- Evaluate ESG governance principles and reporting requirements.
- Examine sustainability risks and opportunities.
- Apply risk assessment methodologies to business scenarios.
- Integrate governance, risk, and compliance considerations into decisions.
- Identify emerging ESG trends affecting organizations.

- Develop effective executive dashboards and management reports.
- Utilize predictive insights to support strategic planning.
- Assess materiality factors influencing sustainability performance.
- Strengthen corporate governance and accountability practices.
- Improve stakeholder communication through data visualization.
- Measure organizational performance using analytical frameworks.
- Support business resilience through informed risk management.
- Align strategic objectives with sustainability priorities.
- Enhance transparency in reporting and performance evaluation.
- Build decision-support models for complex business environments.

Targeted Competencies

Participants will gain the following competencies during the Data Analysis, ESG Governance & Risk for Managerial Decisions program:

- Business data interpretation and evaluation.

- Risk appetite and tolerance frameworks.
- Risk mitigation and response planning.
- Emerging risks in dynamic business environments.
- ESG-related risks and sustainability challenges.
- Building organizational resilience and continuity.
- Integrating risk management into strategic planning.

Unit 5: Integrating Data Analysis, ESG Governance, and Risk into Managerial Decisions

- Linking analytics, governance, and risk management.
- Decision-making models for complex environments.
- Using predictive analytics for strategic forecasting.
- Evaluating business scenarios through analytical frameworks.
- Combining ESG metrics with financial performance measures.
- Assessing investment opportunities using sustainability indicators.
- Measuring long-term organizational value creation.
- Developing integrated governance and reporting systems.
- Executive decision-support tools and methodologies.
- Data storytelling for leadership communication.
- Creating balanced performance scorecards.
- Enhancing transparency through integrated reporting.
- Monitoring strategic objectives through analytics.
- Supporting regulatory compliance through governance controls.
- Applying evidence-based decision-making principles.
- Evaluating organizational sustainability maturity.
- Building a culture of accountability and performance.
- Continuous improvement through data-driven insights.

Final Insights & Key Takeaways

Effective managerial decisions require integrating business analytics, ESG governance practices, and enterprise risk management to create sustainable organizational value and improve strategic outcomes. Organizations that successfully combine data-driven insights, governance excellence, and proactive risk oversight are better positioned to enhance performance, strengthen resilience, and achieve long-term success in evolving business environments.
