18 - 29 Aug 2024  
Kuala Lumpur (Malaysia)

# Green Supply Chains Management Practices Course

**Ref.:** 4028\_243495 **Date:** 18 - 29 Aug 2024 **Location:** Kuala Lumpur (Malaysia) **Fees:** 6500 Euro

## Introduction

The time for action on greening supply chains has come. Daily headlines report food shortages and concerns about energy security and dangerous climate change. Current forecasts suggest that by 2050, the human population will grow to around 9 billion and that per capita consumption of hard and soft commodities is set to increase.

An incredible challenge lies ahead of us: already, the production, extraction, and consumption of basic commodities are contributing to humanity's unsustainable ecological footprint.

Resource access will be a major strategic corporate issue in the coming decades. We are convinced that the winners will be those companies that can demonstrate that their supply chains are clean and green.

## What is Green Supply Chain Management?

Green Supply Chain Management GSCM integrates environmentally friendly methods and technologies into supply chain management. Aspiring professionals can enhance their expertise and marketability by seeking certifications such as the green supply chain management certificate course and becoming certified green supply chain professionals or certified sustainable supply chain professionals.

The importance of green supply chain management rests on its ability to significantly reduce ecological impacts while offering substantial economic and competitive advantages. It leads to green supply chain management benefits, such as cost savings from reduced energy and waste management, improved customer satisfaction, and innovative product design, leading to green, sustainable supply chain solutions.

Delving into the impact of green supply chain management reveals a reduced carbon footprint and enhanced corporate image. The advantages of green supply chain management include environmental and operational efficiencies, making green supply chains an imperative for modern business. The greening of the supply chain represents a pivotal shift towards more sustainable business practices.
