Accounting: Information for Planning, Decision Making, and Control

Ref.: 2046_257619 **Date:** 06 - 17 Jul 2025 **Location:** Sharm El-Sheikh (Egypt) **Fees:** 6300 Euro

Introduction

Managerial accounting is an activity that provides financial and non-financial information to business managers and other internal decision-makers of an organization.

This strategic information, planning, and control accounting for decision-making course examines how administrative accounting information is gathered and how business professionals use it to make adequate plans and decisions.

Lessons such as fundamentals of managerial accounting, cost accounting concepts, and organizational accounting approaches will provide you with the ideas, procedures, and analytical skills you'll need to make informed decisions in today's challenging business world.

Managerial accounting is not as widely used as other forms of accounting, nor is it as known. While companies concern themselves with financial accounting methods like audits, budgets, and financial statements, they often ignore entirely the forward-thinking methods of managerial accounting.

Targeted Groups

- Financial officers.
- Controllers.
- Accountants.
- Treasurers.
- Corporate planning.
- Business development professionals.
- This strategic information, planning, and control accounting for decision-making course is for managers from other non-financial areas willing to understand the financial aspects of analysis, planning, and control.
- This strategic information, planning, and control accounting for decision-making course is for employees who want new knowledge to improve their careers.

Integration of Strategic Information Systems in Accounting

Information technology plays a pivotal role in the modern accounting landscape. This strategic information, planning, and control accounting for decision-making course touches on strategic information system planning and integrating information technology strategic plans, which are critical for informed financial planning and business strategy execution.

Learners will explore how control in accounting information systems is necessary for accuracy and compliance and vital in providing timely data for strategic decisions, ensuring that organizations can adapt to dynamic markets with agility and precision.

Accounting for Decision Making and Control

Participants will delve into the crucial accounting for decision-making and control solutions, which form the backbone of managerial insight and effective oversight.

This strategic information, planning, and control accounting for decision-making course includes leveraging financial accounting tools for business decision-making, analyzing the role of accounting information in planning and control, and understanding why management needs accounting information for strategy formulation and performance evaluation.

The strategic information, planning, and control accounting for decision-making course pays special attention to the nuances of financial and managerial accounting for decision-makers. It emphasizes the administrative-accounting information uses that are critical for advancing organizational goals.

Course Objectives

At the end of this strategic information, planning, and control accounting for decision-making course, the participants will be able to:

- Use financial information for guiding decisions.
- Understand how to optimize decisions through make vs. buy analysis.
- Develop critique plans that create results.
