ACI Dealing Certificate Training Course

Ref.: 2066_264249 **Date:** 30 Jun - 04 Jul 2024 **Location:** Istanbul (Turkey) **Fees:** 4200 **Euro**

Introduction

The ACI dealing certificate is a foundation program that provides individuals with a thorough understanding of the workings of the global financial markets. It focuses on the structure and operation of the significant foreign exchange and money markets, presenting an overview of the core products within these markets, including cash, forwards, and derivatives.

The ACI dealing course imparts the essential skills and knowledge, including the fundamental mathematics utilized in these markets, necessary for effective participation.

ACI training courses and certification programs like the ACI Dealing Certificate are designed to elevate expertise in the financial markets. Attaining ACI certifications, such as the ACI dealer certificate, typically requires comprehensive training and a deep understanding of financial market dynamics.

For those seeking ACI training near their location, it's worth researching local opportunities for ACI certification programs or considering online ACI training options.

Attending ACI conferences can also contribute to a deeper understanding of the fast-evolving financial industry, offering access to a network of professionals and experts.

What is the ACI Dealing Certificate?

An ACI dealing certificate symbolizes the recipient's comprehensive grasp of financial market operations, products, and risk management strategies.

This ACI dealing certification is widely recognized and is an industry benchmark for financial market competence.

At the end of this ACI dealing course, the target competencies will be able to develop:

- Financial markets environment.
- Foreign exchange.
- Rates money and interest rate markets.
- FICC Fixed Income, Currency, and Commodities derivatives.
- Practical applications in financial markets.

Course Content

Unit 1: Basic Interest Rate Calculations

- Calculate the present and future values using the arithmetic techniques of discounting and compounding for both a money market instrument terminated at maturity and one rolled over at maturity.
- Calculate simple interest rates using different day counts and annual basis conventions.
- Identify the day count and annual basis conventions for the euro, sterling, Swiss franc, US dollar, and Japanese yen.
- Fix the conventional frequency and timing of payments by cash market instruments, including those with an original term to maturity of more than one year.
- Calculate broken dates and rates through linear straight line interpolation.
- Define EURIBOR, LIBOR and EONIA.
- Convert interest rates and yields between the money market basis and bond basis in currencies where there is a difference.
- Calculate a forward-forward rate from two mismatched cash rates.
- Calculate a cash rate from a series of forward-forward rates for consecutive periods.
- Calculate the value of a discount-paying money market instrument from its discount rate straight discount and convert a discount rate directly into an accurate yield.
- Plot a yield curve, describe its shape and the fundamental changes in its shape using market terminology, and outline how the pure expectations theory, liquidity preference theory, and market segmentation hypothesis explain the shape of the curve.

Unit 2: Cash Money Markets

- Define the money market.
- Describe the main features of the basic types of cash market instruments -i.e.interbank deposits, bank bills or bankers' acceptances, treasury or central bank bills, commercial paper, certificates of deposit -in terms of whether or not they are securitized, transferable or secured; in which form they pay return i.e. discount, interest or yield; how they are quoted; their method of issuance; minimum and maximum terms; and the typical borrowers/issuers and lenders/investors that use each type.
- Use generally accepted terminology to describe the cashflows of each type of instrument.
- Understand basic dealing terminology.
- Distinguish between and define what domestic, foreign, and euro-offshore money markets mean, and describe the principal advantages of Euromarket money instruments.
- Describe the differences and similarities of classic repos and sell/buy-backs regarding their legal, economic, and operational characteristics.
- Define initial margin and margin maintenance.
- List and outline the main types of custody arrangements in the repo.
- Define general collateral GC and specials.

Unit 3: Foreign Exchange

- Identify the base currency and the quoted currency in standard exchange rate notation.
- Select which currency should be the base currency in any currency pair.
- Recognize the ISO codes for the currencies of the countries affiliated to ACI - The Financial Markets Association.
- Distinguish between the "big figures" and the "points/pips."
- Apply a bid/offer spot exchange rate as a price-maker and price-taker to convert a base or quoted currency amount.
- Explain the relationship between the outright forward rate, the forward points, the spot rate, and interest rates, including the concept of interest rate parity and the possibility and idea of covered interest arbitrage.
- Distinguish between precious metals trading for physical delivery and book entry.

Unit 4: Forward-Forwards, FRAs, and Money Market Futures & Swaps

- Describe the mechanics and explain the terminology of a forward-forward loan or deposit and the interest rate risk created by such instruments.
- Explain how FRAs, money market futures, and money market swaps are derivatives of forward-forward positions, and outline the advantages of derivatives.
- Describe the mechanics and terminology of FRAs, use quoted prices, select the correct contract, decide whether to buy and sell, identify the settlement rate, and calculate the settlement amount.
- Explain how FRAs can be used to hedge interest rate risk.
- Describe the mechanics and terminology of money market futures, use quoted prices, select the correct contract, decide whether to buy and sell, identify the settlement rate, and calculate variation margin payments.

Unit 5: Options

- Define an option and compare and contrast options with other instruments.
- Define strike price, market price, the underlying, premium, and expiry.
- Calculate the cash value of a premium quote.
- Describe how OTC and exchange-traded options are quoted and when a premium is conventionally paid.
- Define call and put options.
- Explain the terminology for specifying a currency option.
- Describe the pay-out profiles of long and short positions in call and put options.
- Describe the exercise rights attached to European, American, Bermudan, and Asian average rate option styles.

Unit 6: Principles of Asset & Liability Management

- Define the meaning and the general concepts of ALM.
- Describe the impact of primary risk factors on the balance sheet's asset and liability side: Impact of interest rate risk, currency risk, liquidity risk, and credit risk.
- Understand the importance of an efficient and reliable organizational infrastructure delivering the necessary data accurately and frequently to manage ALM Risks.
- Understand the use of Gap management: interest and duration mismatches.
- Explain asset and liability management techniques: Cash flow management, duration management, and gap limits.
- Describe using different interest rates and FX derivatives for implementing hedging techniques against ALM risks.
- Use credit risk transfer instruments for balance sheet management: Credit derivatives and asset securitizations.

Unit 7: Principles of Risk

- A comprehensive understanding of various aspects of risk, including:
 - Market risk.
 - Credit risk.
 - Operational risk.
 - Legal, regulatory, and reputation risk.
 - Liquidity risk.
