Advanced Maintenance Planning and scheduling training Course

Ref.: 6006_266014 **Date:** 09 - 13 Mar 2025 **Location:** Kuala Lumpur (Malaysia) **Fees:** 4500 Euro

Introduction

Maintenance is a high-leverage contributor to business profitability through its impact on equipment capacity, product quality, safety, health, and the environment, and the cost of production. The results and benefits from implementing a world-class maintenance operation should yield a significant improvement in plant profit, as well as many intangible benefits such as enhanced customer satisfaction, employee pride, and vendor relations.

Maintenance planning is fundamental to the success of operations. Suppose you aim to have a world-class enterprise. In that case, the maintenance organization and strategy have a critical role to play in this mission. Driven by business goals, such a strategy cannot be seen as separate from other functions but rather as an intrinsic part of a complete approach to high-performance operation.

The business goals will place organizational as well as technical demands on the enterprise. The strategy, therefore, has to integrate and guide the implementation of technical and managerial strategies at all organizational and process levels.

The strategy/philosophy must represent the very best technology, procedures, and practices available relevant to the business goals of the organization. The strategy must define the processes/procedures/practices required to achieve the highest possible degree of maintenance management and maintenance effectiveness while minimizing the total life-cycle costs of new assets and current operating expenses of existing investments.

Targeted Groups

This maintenance planning and scheduling course is for Those involved in the planning, supervision, or management of maintenance activities and anyone interested in learning more about the critical role of maintenance in a company.
