Project Management for Supply Chain Professionals Course

Ref.: 4006_282182 **Date:** 02 - 06 Mar 2025 **Location:** Kuala Lumpur (Malaysia) **Fees:** 3900 Euro

Introduction

Supply management manages relationships, information, and materials across organizational boundaries to deliver enhanced customer service and economic value. Supply managers aim towards synchronizing and amalgamating these flows by implementing a specific ordering of work activities across time and place, with a beginning, an end, clearly identified inputs and outputs, and a structure for action.

Project Management is also a structured process of managing workflow in a specific order across time and place. The close similarities between these two processes provide a firm foundation to expand the supply manager's worldview to adopt project management principles and techniques.

This supply chain project management course focuses on integrating project management principles into the supply management process. In this course, you will learn how project management concepts could be applied to enhance supply management.

In this supply chain project management course, You will also gain an understanding of the tools and techniques used to initiate, execute, manage, and control a project. Possible initiatives for the improvement of supply management through the application of project management concepts will be emphasized.

Understanding Supply Chain Project Management

As part of our exploration into understanding and learning what supply chain project management is, we must acknowledge its significance in optimizing processes and delivering value in supply chains.

Professionals in this field leverage methodologies that form the backbone of supply chain and project management, which will be covered extensively in this course. By learning these best practices, you will be better prepared to achieve supply chain project management certification and effectively lead a supply chain project.
