Safety Audit & Site Inspection Training Course

Ref.: 6086_301422 **Date:** 03 - 07 Feb 2025 **Location:** Munich (Germany) **Fees:** 5200 **Euro**

Introduction:

What you do not measure, you cannot improve on every system; however, good on paper needs to be checked to see if it works in practice. How much more important is this need when what is at stake is money and human lives?

This safety audit and site inspection course will cover the essentials of Audits. Delegates will learn that an audit is about examining the systems within a company and verifying that the systems actually exist and that these systems are within the legislative requirements. Within this essential PetroKnowledge training course, the focus will also be on methods of identifying gaps that should be filled and or improved upon.

In this safety audit and site inspection training course, participants will learn about document searches, interviews, and actual site inspections. audit and inspection findings are facts and not opinions, and this is emphasized throughout the course.

This safety audit and site inspection course offers a robust foundation for those aiming to become certified process safety auditors or certified safety auditors. The safety audit and site inspection course prepares professionals to effectively conduct safety audits and site inspections with a high standard of compliance and competence.

Understanding Safety Audits:

A safety audit is a structured process of collecting independent information on the efficiency, effectiveness, and reliability of the total health and safety management system and drawing up plans for corrective action. Auditing examines each stage in the health and safety management system by measuring compliance with the controls the organization has developed.
