Creating Backup & Restoring in EDMS Training Course

Ref.: 15513_312854 **Date:** 25 Apr - 06 May 2027 **Location:** Kuala Lumpur (Malaysia) **Fees:** 8000 Euro

Introduction:

In today's digital age, effective document management and security are essential for businesses of all sizes. This ten-day backup and restore technique in the EDMS training program aims to equip participants with the knowledge and skills to implement best practices in document management, create backups and backup and restore processes, ensure security, and adhere to ISO standards.

In the backup and restore techniques in the EDMS course, participants will explore top document management software products, learn about advanced security measures, and understand the importance of maintaining document integrity.

Electronic Document Management System EDMS is an effective solution for managing, storing, and retrieving organizational documents. Understanding the meaning of EDMS and its application can streamline your organization's documentation processes. It will provide EDMS training for database backup and restore, as well as secure folder backup and restore techniques.

The backup and restore manager's role is critical in ensuring the safety and availability of device documentation, and as such, it will be a key focus in our training. While creating a database module backup, participants will learn the technical aspects and understand the strategic importance of document restoration.

Participants will engage in practical exercises on restoring backup techniques and explore scenarios for restoring the backup effectively. It is designed to empower employees to manage and protect their organization's digital assets with proficiency by delving into the EDMS definition and its functionalities.

Targeted Groups:

- Employees are responsible for document management.
- IT professionals.
- Compliance officers.
- Managers overseeing data security.
