

Power System Protection Training

22 - 26 Dec 2024
Istanbul (Turkey)

Power System Protection Training

Ref.: 15575_315534 **Date:** 22 - 26 Dec 2024 **Location:** Istanbul (Turkey) **Fees:** 5000 Euro

Introduction:

Ensuring the safety and reliability of power systems is paramount in the oil and gas industry. Power System Protection Training is critical in this sector, addressing the intricate mechanisms and protocols required to safeguard vital infrastructure.

This training delves into the nuanced world of power system protection, equipping participants with the knowledge and skills to navigate the complex interplay of electrical components, environmental factors, and operational demands.

As such, Power System Protection Training participants are typically professionals deeply entrenched within the oil and gas industry, including engineers, technicians, and managers responsible for overseeing power systems within various facets of extraction, refinement, and distribution processes.

Their roles demand a comprehensive understanding of power system protection principles to mitigate risks, ensure operational continuity, and uphold industry standards amidst the dynamic challenges inherent to the oil and gas landscape.

Targeted Groups:

- **Engineers:** Designed, implemented, and maintained power systems within oil and gas facilities.
- **Technicians:** Responsible for troubleshooting, testing, and maintaining electrical equipment within the industry.
- **Managers:** Oversee power system operation, maintenance, and optimization to ensure efficiency and safety.
- **Safety Personnel:** Ensured compliance with industry regulations and implemented safety protocols related to power system protection.
- **Maintenance Crew:** Engaged in routine inspections, repairs, and upgrades of power system components to uphold operational integrity.
- **Field Operators:** Require knowledge of power system protection to ensure uninterrupted operations and respond effectively to emergencies.
- **Regulators:** Responsible for enforcing compliance with safety standards and regulations governing power system protection in the oil and gas sector.

Course Objectives:

At the end of this course, the participants will be able to:

- Understand the fundamentals of power system protection specific to the oil and gas industry.
- Learn to identify potential risks and vulnerabilities in power systems within oil and gas facilities.
- Gain proficiency in selecting and implementing appropriate protection schemes for different components.
- Acquire skills in fault analysis and troubleshooting in oil and gas power systems.
- Familiarize with industry best practices and standards for power system protection.
- Develop strategies for preventive maintenance and proactive risk management.
- Enhance crisis response capabilities through effective power system protection strategies.
- Improve overall operational efficiency and reliability of power systems in oil and gas environments.

Targeted Competencies:

- Risk Assessment.
- Fault Analysis.
- Protection Scheme Design.
- Troubleshooting Techniques.
- Industry Standards Compliance.
- Preventive Maintenance.
- Emergency Response.
- System Reliability Enhancement.

Course Content:

Unit 1: Introduction to Power System Protection:

- Overview of power system protection in the oil and gas industry.
- Key concepts and terminology.
- Understand the importance of power system protection for operational safety and reliability.
- Know the historical development and advancements in protection technology.
- Explore the role of power system protection in minimizing downtime and financial losses.

Unit 2: Protection Devices and Schemes:

- Learn about the types of protection devices: relays, circuit breakers, and fuses.
- Protect the schemes for different components: transformers, generators, and motors.
- Select the criteria for protection devices.
- Coordination between various protection devices to ensure selective isolation.
- Integrate digital and microprocessor-based protection systems.

Unit 3: Fault Analysis and Troubleshooting:

- Know the methods for detecting and analyzing faults.
- Common faults in oil and gas power systems.
- Troubleshooting techniques and tools.
- Case studies on fault analysis and resolution in oil and gas facilities.
- Impact of environmental factors on fault occurrence and protection effectiveness.

Unit 4: Standards and Best Practices:

- Understand the industry standards for power system protection: IEEE, IEC, and NERC guidelines.
- Regulatory requirements and compliance: local and international regulations.
- Know the best practices for implementing and maintaining protection systems: periodic testing, calibration, and upgrades.
- Document and reporting protocols for protection system performance.
- Learn the role of continuous training and competency development in maintaining high protection standards.

Unit 5: Preventive Maintenance and Emergency Response:

- Understand strategies for preventive maintenance of protection systems.
- Emergency response planning and execution.
- Case studies on successful and failed protection scenarios.

**Registration form on the :
Power System Protection Training**

code: 15575 **From:** 22 - 26 Dec 2024 **Venue:** Istanbul (Turkey) **Fees:** 5000 **Euro**
